

Data as received by WHO from national authorities by 10:00 CEST, 10 May 2020

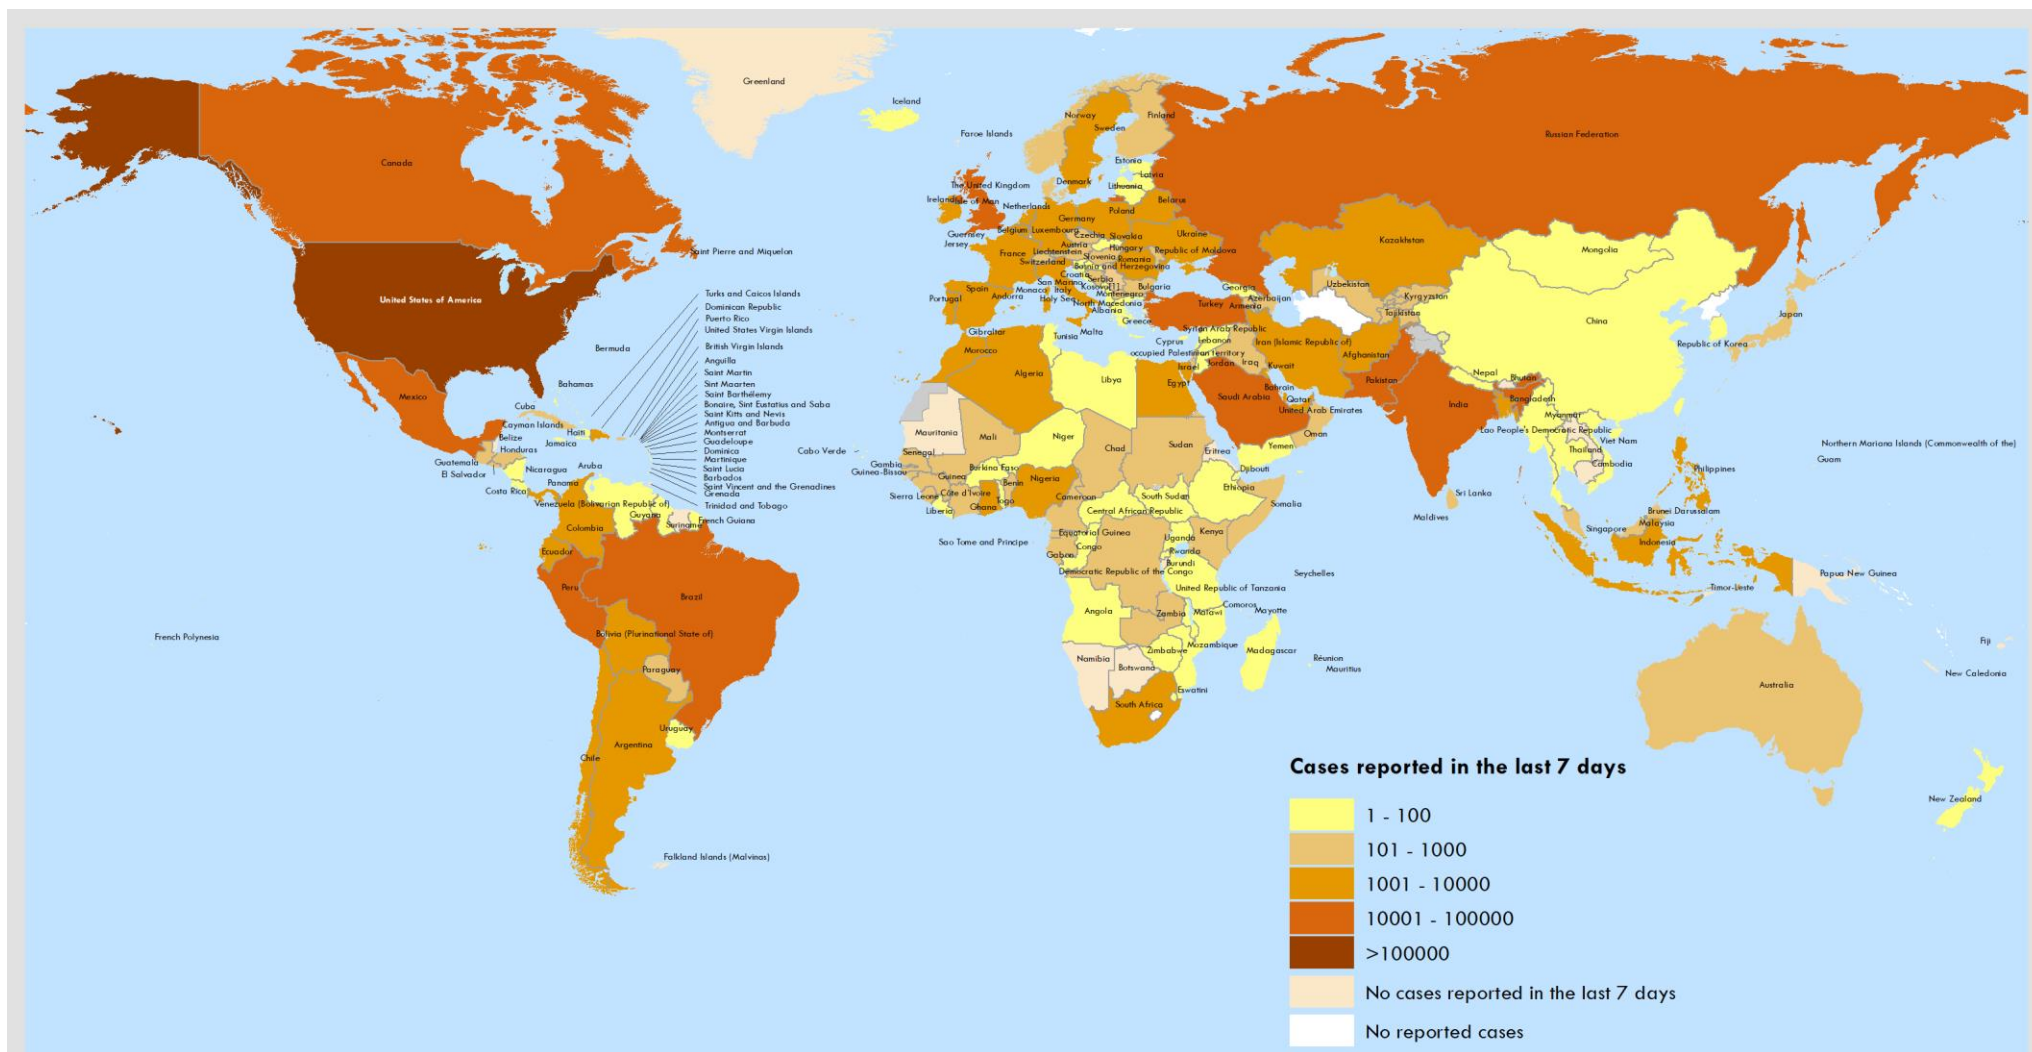

A newly-released WHO scientific brief summarizes the current evidence on the
on severe acute respiratory illness due to
COVID-19.

Pan American Health Organization and the United Nations Office for Project Services have published
new
measures to protect themselves from infection. The guidelines are only available in Spanish at this time.
for worker to take

Due to a change in reporting system to align with figures published by the US CDC, counts for the United
States of America were adjusted to 1 245 775 cases (-99 new cases) and 75 364 deaths (5475 new
deaths).

Total (new cases in last 24 hours)

42 626 cases (2082)	1369 deaths (47)
1 655 378 cases (18 537)	98 723 deaths (6830)
255 728 cases (9706)	8878 deaths (130)
1 707 946 cases (25 608)	155 552 deaths (1319)
95 314 cases (4506)	3356 deaths (152)
159 662 cases (1124)	6470 deaths (22)

WHO periodically updates the [Global Surveillance for human infection with coronavirus disease \(COVID-19\) document](#) which includes surveillance definitions.

COVID-19 death is defined for surveillance purposes as a death resulting from a clinically compatible illness in a probable or confirmed COVID-19 case, unless there is a clear alternative cause of death that cannot be related to COVID disease (e.g. trauma). There should be no period of complete recovery between the illness and death.

Caution must be taken when interpreting all data presented. Differences are to be expected between information products published by WHO, national public health authorities, and other sources using different inclusion criteria and different data cut-off times. While steps are taken to ensure accuracy and reliability, all data are subject to continuous verification and change. Case detection, definitions, testing strategies, reporting practice, and lag times differ between countries/territories/areas. These factors, amongst others, influence the counts presented with variable underestimation of true case and death counts, and variable delays to reflecting these data at global level.

The designations employed, and the presentation of these materials do not imply the expression of any opinion whatsoever on the part of WHO concerning the legal status of any country, territory or area or of its authorities, or concerning the delimitation of its frontiers or boundaries. Dotted and dashed lines on maps represent approximate border lines for which there may not yet be full agreement. Countries, territories and areas are arranged under the administering WHO region.

^[1] All references to Kosovo should be understood to be in the context of the United Nations Security Council resolution 1244 (1999). In the map, number of cases of Serbia and Kosovo (UNSCR 1244, 1999) have been aggregated for visualization purposes.

Counts reflect laboratory-confirmed cases and deaths, based on [WHO case definitions](#) unless stated otherwise (see [b b](#)), and include both domestic and repatriated cases.

Other*: includes cases reported under the international conveyance (Diamond Princess).

Due to the recent trend of countries conducting data reconciliation exercises which remove large numbers of cases or deaths from their total counts, WHO will now display such data as *fft* numbers in the “new cases” / “new deaths” columns as appropriate. This will aid readers in identifying when such adjustments occur. When additional details become available that allow the subtractions to be suitably apportioned to previous days, graphics will be updated accordingly. Prior situation reports will not be edited; see [covid19.who.int](#) for the most up-to-date data.

ⁱ Transmission classification is based on a process of country/territory/area self-reporting. Classifications are reviewed on a weekly basis, may be revised as new information becomes available, and are based on the highest category reported. Differing degrees of transmission may be present within countries/territories/areas. Categories:

- No cases: with no confirmed cases (not shown in table).
- Sporadic cases: with one or more cases, imported or locally detected.
- Clusters of cases: experiencing cases, clustered in time, geographic location and/or by common exposures.
- Community transmission: experiencing larger outbreaks of local transmission defined through an assessment of factors including, but not limited to: large numbers of cases not linkable to transmission chains; large numbers of cases from sentinel lab surveillance; and/or multiple unrelated clusters in several areas of the country/territory/area.
- Pending: transmission classification not been reported to WHO.

ⁱⁱ “Territories” include territories, areas, overseas dependencies and other jurisdictions of similar status.

- 10 May 2020, United States of America: Counts were adjusted due to a change in reporting system to align with figures published by the US CDC.
- 10 May 2020, Ecuador: Counts were adjusted to align with revised figures published by national authorities.
- 10 May 2020, São Tomé and Príncipe: Counts were adjusted to align with revised figures published by national authorities.
- Update 10 May 2020, Japan: Situation report no. 111 originally reported 15 747 total cases (119 new cases) and 613 deaths (12 new deaths). Counts have been corrected here.
